

ANGELUS BRITANNICUS

An Ephemeris for the Year

of our Redemption 1662. being  
the Second after the

*Bissextile or Leap-Year*

And from the Creation of the World, 5617.

Amplified with

Astrological Observations from the Suns  
Ingresse into *Aries*, and the other Cardinal  
points: from Eclipses and various  
Configurations of the Cœlestial Bodies.

With Tables of right and Oblique Ascension to Erect  
a Cœlestial Scheme or Figure of Heaven by, with other Tables  
necessary, and easie to be understood.

Calculated for the Meridian of LONDON  
where the pole Artick is elevated above the  
Horizon, 51. degrees, and 32. minuits,  
but may indifferently serve for ENGLAND  
SCOTLAND and IRELAND.

By John Ianner Student in Physick and  
Astrology.

*Prolegomena Altissima Scientiarum est, tum quia de Cœlestibus, tum  
quia de futuris, quorum Scientia Non solum divina est,  
sed etiam utilissima.*

LONDON,

Printed by Thomas M. for the Company of  
Stationers, 1662.

January hath XXXI. days.

Month days.  
Week days.

None drawze fancy, Heaven's assist my pen!  
To th' New Year, y'are welcome Gentlemen.  
Our stile Globe runs round, my mind's at ease,  
Flye sorrows with her to th' Antipades:  
The New Year now begins, th' old's past away.  
Heavens blessings on us, for which Let us pray.

# January 1662.

Month days.

From vass and giddy actions that disturbe us,  
From chains and setters that in prison curb us,  
From dangerous Plots, Rebellion, shedding Blood,  
From such like mischiefs hard to be withstood,  
From Gods revenging hand, that can sliver us,  
From the terrours of the Grave, Good Lord deliver us.

Here as before I'd writ Chronology,  
'Twould not be licenc'd by Authority.  
I well contented am, why should the  
same  
Page memorize our Glory and our  
Shame?  
Heavens bleesse our Nation; let us  
never see  
So fruitless and so bloody a Tragedy!  
Heaven give us Peace, and teach us  
union,  
To live like Saints here, till Christs  
Kingdome come.

# February hath XXVIII. Days.

we all have seen, we all have found too true,  
 what 'tis to pull old Fabricks down and set up new,  
 O! what a taske it is, what an adventure,  
 It's hard to make a Breach, it's worse to enter,  
 And when y've done, whether it stand or fall,  
 To please the people in't is hard'st of all.

# February 1662.

Month days.

From ugly actions with pretences faire,  
From pulling mountains down, and in the aire  
Building of Castles, without foundation,  
Low towres demolish and build Babilon,  
Unhinging gates, and from the angry Cry,  
Of London, Lord Deliver us, Say I.

March hath XXXI. Days.

Month days,  
 Week days,  
 We all have seen th' effects of want of Love,  
 Mercy's are giv'n, mercies to improve,  
 To use it as becometh Christian men,  
 Not to enslave our dearest Brethren :  
 Oh pity 'tis, whilst men cry up Gods Cause,  
 To Act against both Gods and natures Laws.

March 1662.

From rash revengers void of wit or care,  
who furiously durst run into a snare,  
To ensnare others, and from Samsons Eloc,  
To destroy others durst destroy themselves:  
From ill begotten Freedom liakt with thrall,  
From such as these, Good Lord Deliver's all.

# April hath XXX. Dayes.

We all have seen, the strength o' th' vulgar cry,  
 One day Hosanna, next Day Crucify:  
 Who on such quick-sands build, dwells on the brinke,  
 O' th' dangerous Ocean, and may quickly stinke,  
 Happy's that Prince, whose claime is better grounded,  
 whose Throne on Righteousness is firmly founded.

April 1662.

From gilded poisonous tongues and flattery,  
The greatest Enemies to Royalty,  
From deep Carousers, whose o're heated brain,  
Makes them appear like the Phanatick train:  
From those who durst their dearest friends betray,  
For self advance, Deliver's Lord, I say.

# May hath XXXI. Dayes.

Month dayes,

Week dayes,

We'ave found that time, we heard our Fathers say,  
we'ave seen this month the merry month of May:  
we cast all by, that might our peace away,  
And made the Heavens Echo back our joy:  
But oh extremes! which made all wise men sad,  
To see (instead of merry) most men mad.

Festival days.

May 1662

From the lewd Deluge of the giddy Times,  
And staining mercies with the wildest crimes.  
From every crying Epidemick Sin,  
Which mars our blessings, and cast poison in,  
Distastes our pallats with a cup of Gall,  
From sin and suffering, Lord deliver's all.

June hath XXX. days.

Month days.

Week days.

We've seen stout armies, who e're kept the field,  
Gainst all opposers, yet were forc'd to yeld  
To fortunes angry frown, heaven so will have it,  
Least any 'gainst her Diety outbrave it,  
Let the most lofty then this lesson know,  
Tis Heaven exalts, tis Heaven that makes men low.

June 1662

Month days.  
 From the proud boasting and vain confidence  
 Of such who misinterpret providence  
 In her unbyas'd path; men void of reason;  
 Against the highest throne committing Treason,  
 From such Phanatick souls, who dare to call  
 Heaven patron to such acts, Deliver's all.

# July hath XXXI. Days.

we've seen the angry people slight their lives,  
 Their trades, their Children too, aie and their wives,  
 To gain revenge: freely bring in their Rings,  
 Their Plate, their Jewels, and their precious things:  
 Instead of them put on the Martial Shield,  
 with joy betake themselves unto the field.

July 1662.

Month days.  
 Form such like discontents, that may mislead,  
 The angry crue in such like paths to tread;  
 What can be done or said, that may assuage  
 The roarings of such waters when they rage?  
 Deliver's from such acts, from every word,  
 That may unsheath the fierce all conquering sword.

August hath XXXI. days.

we've seen strange actions 'mongst the fickle crew,  
 Inge on both sides and to neither true :  
 Gain'd a faire fame, and for a time stood strong,  
 without re coyling : but could not hold long,  
 But forced shamefully to fall at last,  
 Because the structure was not firmly plac'd.

August 1662.

**Month days.**

From the ill grounded principles of those  
whose bottoms are but faire seeming shewes ;  
From daily strivings in the Nations wombe,  
As if Rebecca's twins again were come  
To be new born, and to afflict their mother ;  
Deliver's from supplanting one another.

we all have seen success is not entail'd  
To Ages or Designs: but they have fail'd,  
who managed a Cause, although most just;  
Lest they presume thereon too far to trust,  
The Jewish cause was good, yet on them fell  
Destruction, for not handling of it well.

# September 1662.

From Gods avenging power; who can root hence,  
 As he hath done, men void of care or sense  
 Of publique miseries; of private woes;  
 Of their own fall; of others overthrowes;  
 Of either God or man; of Heaven or Hell;  
 Deliver's from 'um, who hate to doe well.

October hath XXXI. days.

Month days.  
Week days.

re all have seen when men slight honestly,  
Just dealing quite outstript by policy,  
That all things they could order or ordain,  
Vote or debate on, proved all in vain:  
Heavens all revenging hand follow'd their guilt,  
And made the blade to quarell with the Hilt.

October 1662.

Month days. From faire pretences framed to delude  
The simple too believing multitude;  
From breaking Oaths Engagements without reason,  
And conscience too; from Murther and from Treason :  
Deliver's from that viperous Medicin,  
That Mortall Treacle to expell the Sin.

Month days

Week days

we all have seen, that heavens all seeing Eye  
Findes out injustice whereso'ere it lye,  
And shewes impartial vengeance upon all  
Oppressors; the oppressed see them fall :  
Both God and man abhors men that oppresse,  
with Mockshoves of dissembled Holyness.

November 1662.

From Quaves o'relaid with Piety and Zeale,  
 whose corrupt insides ban'd the Common-weale,  
 Cunning Decoys, well skill'd to use the wing,  
 The foolish Ducks into their Snares to bring:  
 Deliver's from such, who mischief intends  
 By seeming friendly, where they are no Friends.

December hath XXXI. days.

Month days,

Week days,

*we all have seen, (that any thing can see, )  
No safer path then that of Honestie ;  
Not many wise nor noble finde this way ,  
But amongst thorne and Bryers go astray :  
Look to your selves as wary as you can ,  
For you're observed both by God and M.m.*

December 1662.

Month days.

From every thing that tends to destroy  
That which is good, from that which doth annoy  
Those honest soules, whose onely aim's to heale  
The breaches of our tottering Common-weale:  
And from all mischeif and mischievous men,  
Good Lord Deliver every one, Amen.

## Astrological Observations,

### An explanation of the Ephemeris & other tables

**E**ACH Month hath two pages, the first or left hand page hath 11. columns; the first column contains the days of the Month, 2. week dayes, 3. Festivals, Terms, and twice in the month the latitude of the planets, and the place of the Dragons head. 4. The place of Saturn in degrees at Noon, with the Aspects of the Moon to him every day they happen. 5. The place of Jupiter and Lunar Aspects as aforesaid. 6. The place of Mars; 7. Of the Sun; 8. Of Venus; 9. Of Mercury; 10. The place of the Moon in degrees and minutes. 11. The Latitude of the Moon in degrees: the places of the Planets are calculated for the Noon of every day.

The second or right hand page hath two Columns: the first contains the days of the Month. 2. The Aspects of the Planets among themselves; the Change, Full and Quarters of the Moon.

The two Tables immediately before the Ephemeris, are useful for finding the time of High water: the first or left hand page shews the names of certain Ports or Havens in and about *England*, with the number of the points of the compass, unto which when the Moon commeth maketh full Sea. The other Table sheweth the time of High water thus: First finde the Haven in the first Table, & the figure which standeth against it, then seek the age of the Moon, which you may do by counting how many days hath passed, since the Moon last changed, till that present day, with the age of the Moon enter the second Table, and in the first column under the title of the age of the Moon, finde the moons Age, on the head of the Table among the great figures, finde the number of the point of the compass; and in the meeting or Angle, you have the time of high water in hours and minutes. For example, I would know the time of high water on the 28th. day of January, I finde the Moon to be 18. days old, I finde *London* in the first table and against it this figure of 5. I enter the 2. Table with 18. the Moons age in the first column, and against that in the column under 5. I finde 5. h. 24. m. which tell me it is high water at *London*,

which is the time of high water at *London* on the 28th. day of January.

## for the Year 1662.

24 34. minuits after 5. It is full sea, at Bristol and those places, against which stands 10. at 9. min. past 9. at those places under 15. as *Yimmouth, Dover, &c.* at 54. m. after-noon, and so of the rest.

The other five tables after the Ephemeris, I have already explained in my last, and for illustration sake I shall now give you one example. I would set a figure for the time of the Sun his ingresse into Aries, which this year happeneth (by the calculation of *Vincent Wing*) at *London* the 9th. day of *March* 18 hours 29. min. 34. seconds after-noon; First I convert the hours and minuits after noon into degrees of the *Aequator*, and they amount to 277. and 30. min. almost, which 30. min. I reject as not breeding any sensible Errour. I look into the next table for the right ascension of the sun, and seeing he is in no degrees of  $\gamma$  his right ascension is no degrees, had there been no degrees of right ascension they must have been added to the degrees of the Equator, and the product had been the right ascension of the mid heaven; The right Ascension now of the mid-heaven, without any further trouble is 277. I look in the table of Right Ascension for that number, and in the 11. column under  $\gamma$  I find it, and 6. answering to it in the first column, therefore I conclude that 6. deg. of  $\gamma$  is upon the cusp of the mid-heaven. To 277. I add 30. which makes 307. which number I look for in the next table, viz. of Oblique Ascensions for the Latitude of 32. and I finde it in the same column under  $\gamma$ , and the number answering to it in the first is 21. which 21. of  $\gamma$ , is the cusp of the eleventh house. I proceed to finde the cusp of the 12. house; thus, to the Oblique Ascension of the 11. house, viz. 307. I add 30. and it makes 337, with which I enter the Table of Obl. Ascen. for 47. deg. 28. min. I find my number in the 12. page, under  $\alpha$  and the number answering in first column is 17, therefore 17. degr. of  $\alpha$  is the cusp of the 12th. house. To 337. I add 30. and it makes 367. and because it exceeds the whole circle, I deduct 360. from it, and there remains 7. which is the Oblique Ascension of the Ascendant, with which I enter the last Table, viz. of Oblique Ascension for the Latitude of 51. deg. 32. m. and in the second column under  $\gamma$  I finde my number, and against it in the first column 17. therefore

## Astrological Observations,

17. deg. of  $\gamma$  Ascends in the figure: you must proceed in the same manner to finde the Cusp of the 2, and 3, houses: for the 2. house you must make use of the same table as for the 12, for the 3, as for the 11, as followeth: to 7. the Oblique Ascension of the Ascendant add 30. which makes the Oblique Ascension of the second house to be 37, degrees, I enter the table of Obli. Ascension of 47. deg. 28. m. and finde 37. in the fourth column, and in the first column the number answering thereto is 4, therefore the cusp of the 2, house is 4, degrees of  $\Pi$ , to 37. add 30. and it makes 67, which number I look for in the Table for 32, deg. of Latitude, and I finde it in the fourth column under  $\Pi$ , and the number answering thereto, in the first column is 23, so that 23. is the cusp of the 3d. house: For the rest of the houses they have the same degrees and minutes of the opposite signes; and that you may know what houses and signes are opposite to each other, observe what followeth,

$\left\{ \begin{array}{l} 10. 11. 12. 1. 2. 3. \\ 4. 5. 6. 7. 8. 9. \end{array} \right. \begin{array}{l} \text{You see here the 10. house is opposite to} \\ \text{the 4, the 4. to the 10, \&c.} \end{array}$

$\left\{ \begin{array}{l} \gamma \ \delta \ \Pi \ \Theta \ \Omega \ \mathcal{M} \ \epsilon \\ \cap \ m \ \mathcal{I} \ \wp \ \approx \ \mathcal{H} \end{array} \right. \begin{array}{l} \gamma \text{ is opposite to } \cap, \text{ and } \cap \text{ to } \gamma, \ \delta \\ \cap \text{ to } m, \text{ and } m \text{ to } \delta, \ \&c. \end{array}$

Having thus placed the signes and degrees upon the cusp of every house, you must next place the planets in the figure, which you must do by observing that the places of the planets are calculated for the noon of every day: observe what signe and degree the planet is in, and what ever House you shall finde the signe a planet is in, in that house place the planet; if he is in more degrees then is on the cusp of the house, place him in the house, if he hath fewer degrees, place him on the other side of the cusp. Over against the 9. day of March in the fourth column, I finde 5. and in the head of the column 2, so that  $\mathcal{H}$  is in 5. deg. of 2; I look into the figure and finde 2 upon the 8th, house 5. deg. because  $\mathcal{H}$  is in 5. deg. one more than the cusp. I place him in the 8th house.  $\mathcal{M}$  I finde to be in 12. degrees of  $m$ , and I place him in the 7. house, for the whole signe is there intercepted.  $\mathcal{J}$  is in 15. degrees of  $\Theta$ , and I place him in the 4 house: Sol is in 0. deg. of  $\gamma$ , therefore I place him in the

# for the Year 1662.

12. house, if he had been in more degrees then 17. he had been the Ascendant. ♀ is in 9. degrees of ♄ and is intercepted in in the Ascendant: ♀ is in 16. at noon, but by 6. the next morning, which is the hour of the ingresse, he is nearer 17, therefore I place him in 17. degrees of ♄ in the 12. house near the ascendant: for the ☽ place on the 9. day she is in 20. deg. 49. m. of ♄: On the 10. day she is in 5. deg. 53. m. of ♄, I subtract the first from the latter, by adding 30. deg. to 5. the remainder is 15. degrees 4. min. then I say if 24. hours give 15. degrees 4. min. what shall 18. hours and a half give: So I finde the Moon to be in 2 deg. 26. m. of ♄. the degrees being lesse then the cusp, I place without the house in the 12. near Sun. The Dragons head is in 28. degrees of ♄, I place him in the sixth house, and ♄ in the 12. in ♄ viz. in the opposite house and signe: thus have you the figure of heaven at the Sun his ingresse into ♄ as followeth.

## Astrological Observations,

At the preventiōnall New Moon 2. degrees of *Capricornus* riseth, and eight degrees of the *Scorpio* mediates the heaven, ♂ in the seventh, ♀ in the tenth, and ♀ in the fourth. At the Full Moon postventionall, we have ♂ in the mid. heaven, the sixteenth degree of ♊ in the Ascendant, and the twelfth degree of ♋ culminating. In this figure we have Venus in the Ascendant, ♀ in the seventh, and ♂ in the fourth, ♀ in the Ascendant is of very good signification to the commonalty, *Haly* saith *Si Venus fuerit in revolutione in Ascendente, erunt homines sani & robusti in suis corporibus, & habebant gaudia multa.* If Venus in a revolution be in the ascendant, it signifieth a healthfull and a prosperous time to the people. *Boratus* in page 577. and 578. saith much to the same purpose, which for brevity sake I omit. Mars in Cancer in the fourth house, in Quartill to the ascendant, and lately in Quartile to the place of the visible Solar Eclipse celebrated the 20. of March 1662. and to the Luminaries at the Lunar Eclipse on the 28th. of September 1661 may give us cause to fear some disturbance, or unto vaward actions by Land and Sea Northward, in and about Scotland, Holland &c. *Boratus* saith, *Si Mars fuerit in quarta, significat mortem & interitum ex egritudine: & intersectionem ex gladiis: & effusionem sanguinis, & eius suspicionem: & finientur ista in meridie à quacunque parte aspiciant, erit tamen initium eorum ex septentrione: magis.* If Mars be in the fourth house, it signifieth dangerous and mortall diseases: Slaughters by the sword: Shedding of blood: the world frighted with such rumours: these things to end in the South, from what part soever they appear, the beginning will be Northward. *Mars in Cancro significat naufragia repente venientia, ex fortis, atque sibilu flitu ventorum: & significat rixam atque contentionem, & bellum in partibus occidentis: & gravabuntur homines causa redditus tributorum: & erunt febres & alia egritudines: & erunt doloris gutturis, ac pectoris, & gravabitur calor, & minuetur pluvia.* Mars in Cancer signifieth sodain Shipwracks, by reason of sodain and strong gusts of wind, it signifieth strife and contention, and Warr in the Western parts: men will be displeased by reason of heav. Taxes: Fea-

## for the Year 1662.

vers and Diseases of the throat and breast will be rife, it causeth heat and drought. *Albumasar* saith, that such a position of Mars signifieth a troublesome year, and the death of fourfooted beasts, especially of horses, ♃ in the seventh house retrograde, and unfortunate is of evill portent to matters and things signified by that house, and to men of the Joviall order, read *Haly*, page 170. the opposition of ♃ and Venus, and the quartile of Mars to the ascendant from a moist mansion, signifieth a dripping Spring, though *Haly* and *Donatus* say it signifieth a drought.

### *Of the summer Quarter.*

**T**He summer Quarter begins when Sol enters ♋, which this year happeneth upon the 10. day of June at 21. hours 26. minutes before noon, or more plainly upon the 11. day of June at 16. minutes after 9 in the morning, at which time 2. degrees and 20. minutes of Virgo ascends our Horizon, and 23. degrees of the Bull Culminates. In the figure we have ♄ near the Ascendant and ♃ with him, in Quartile to ♀ in the fourth, occasioning strong tempests, with thunder, lightning, great showers, &c. with little better harmony among great men in many places. Soon after the Sun and Jupiter beholds each other from the 10th. and 3d. house with a Δ Aspect, ♄ applyes to a \* of ♃: at this time the Sun hath finished his furthest journey toward the Northern inhabitants of the world, making our longest day and shortest night.

### *Of the Autumnal Quarter.*

**A**utumn begins when Sol enters the first scruple of heavens balance, and makes the days and nights equall throughout the world (the poles excepted) which this year happeneth on Fryday the 12. of September 23. min. after midnight; at which time 1. degr. 30. min. of ♏ ascends and the fifth degree of ♍ up on the midheaven, ♃ and ♄ are both in the North Angle.

### *Of the winter Quarter.*

**T**He Winter quarter begins at such time as the Sun enters Capricornus or the Goat, and makes the shortest day and longest night to us, who inhabite the Northern part of the world, which happeneth this year on thursday the 11. of December at 7. minutes

## *Astrological Observations,*

minuits after noon; at which time 5. degrees of the Ram ascendeth our Horizon, and 2. degrees of the Goat upon the Medium *Celi*. The ☉ and ☿ in the 9th. house of heaven, hastening to a Conjunction, and the Moon in the Ascendant lately in Trine to them both, they come to Conjunction on the twenty fourth day, which abates the coldness of the season much.

*Of Eclipses happening this year, 1662.*

**T**Wice will the Sun be Eclipsed this year, but neither of them will be visible to us. The first happeneth on Monday the 10th. day of March about 2. in the morning, it will be beneath our horizon, therefore not visible to us, but will be visible to such as saile beyond the Line, upon the Indian Sea, about the Green Island's *Nova Guinea*, where it will appear totall. It may be observed of less quantity in the Island *Sumatra*, *Boraco*, the *Java's*: and in the *Lucach*, *Beach*, and *maleter Kingdomes*.

The other Eclipse of the Sun will be on Tuesday the second of September, about noon, yet not visible to us, by reason of the Moons parallax: it will be a great Eclipse in *Guinea* in *Africk*, about *Gago*, *Modinga*, *Gubar*, and near the black River, it will be almost totall. Both of these Eclipses are Centroll and neare the noads, so that there can be no Eclipse of the Moon this year.

*Certain necessary Rules for the administration of Physick, letting of Blood, &c.*

**T**HE powers of the body of man are threefold, viz. Natural, Virall and Animall; the natural Power is seated in the Liver and is governed by *Jupiter*, assisted by *Luna* and *Venus*. From this is bred the four humours, viz. Blood, Choller, Phlegme and Melancholly. Blood is made of meat perfectly concocted, in quality hot and moist, and is under *Jupiter*. Choller is made of meat more then perfectly concocted, It is the Spume or Froth of the Blood, hot and dry under *Mars*. Phlegme is made of meat not perfectly digested; it

## for the Year 1662.

is cold and moist in quality under the *Moon* and *Venus*. Melancholly is the Sediment of Blood, cold and dry in quality, governed by *Saturn*.

The naturall powers comprehends these foure administering Virtues or Faculties, viz. Attractive, Retentive, Digestive and Expulsive; the Attractive faculty is hot and dry under the influence of the *Sun* and *Mars*, fortified when the Moon passeth through *Aries*, *Leo*, *Sagittarius*; the retentive faculty is cold and dry under *Saturn*, and is strengthened, the Moon in *Taurus*, *Virgo*, *Capricornus*; the digestive is hot and moist ruled by *Jupiter*, fortified the Moon passing through *Gemini*, *Libra*, *Aquarius*. The expulsive is cold and moist under the Moon, assisted by the Moon in *Cancer*, *Virgo*, or *Pisces*. In strengthening these faculties, let the Moon be in one of those signes, or let one of them Ascend. The Vitall Power is seated in the heart, and is governed by the Sun, it is strengthened by its medicines, and is best done when the Sun is in Aspect with the fortunes, viz. *Jupiter* and *Venus*.

The Animall faculty hath its residence in the brain, and is divided into Intellective and Sensitive; the first is under the influence of *Mercury*, the other of the Moon, and are both assisted by the benevolent rays of *Jupiter* and *Venus*:

The Moon in <i>Cancer</i> ,	$\left. \begin{array}{c} \text{♄} \\ \text{♀} \\ \text{♁♂} \end{array} \right\}$	Purge Melancholly,
<i>Scorpio</i> or <i>Pisces</i> in		Purge Choller,
<i>Seatile</i> or <i>Tyne</i> to		Purge Phlegme.

To prepare humors let the Moon be in	<i>Gemini</i> , <i>Libra</i> , <i>Aquarius</i>
Take Glsters the Moon in	<i>Aries</i> , <i>Libra</i> , <i>Scorpio</i> .
Take Vomits the Moon in	<i>Aries</i> , <i>Taurus</i> , <i>Capricornus</i> .
Take Gargarismes the Moon in	<i>Aries</i> , <i>Cancer</i> .
Purge the head by sneezing the Moon in	<i>Cancer</i> , <i>Leo</i> , <i>Virgo</i> .
Stop Rhumes the Moon in	<i>Aries</i> , <i>Taurus</i> , <i>Capricornus</i> .

The

## Astrological Observations, &c.

For Bathing let the Moon be in signes contrary to the Nature of the Disease. Sweat two or three dayes after the Change, or about the Full Moon; and let the moon be in Aries, Leo, or Sagittarius.

*The season for bleeding is at Spring and Fall.*

Let young People blood from Change to the First quarter.  
Bleed the middle Aged from the First quarter to the Full.  
In Elder Age bleed from the Full to the Last quarter.  
In Old Age bleed from the Last quarter to the Change.

Bleed the	{	Sanguine Chollerick Phlegmatick Melancholly	}	the Moon in	{	♄ or ♀ ♊ or ♋ ♋ or ♌ ♌ or ♍	}
-----------	---	--	---	-------------	---	--------------------------------------	---

It is better if the Moon be in Conjunction, Sextile, or Trine with the Fortunes; or the Planets in like Aspects among each other: The Moon in ill Aspect with the Infortunes, or the Infortunes so configured, forbid Phlebotomy. Let not the Moon be in Gemini, or Leo. Observe these Rules unlesse in the Plurisie, Phrensie, Quinzy, Apoplexy, &c. where Phlebotomy ought not to be delayed.

*My work is done, and now I must conclude,  
 Pardon my shaking hand, expressions rude,  
 My frozen Inke too, and my ragged quill,  
 My fettered Fancy, accept my good will:  
 My innocence abhors, my harmlesse Pen  
 Scorns to bespatter any sort of men:  
 Nor is my hand flourish'd with flatteries,  
 Frailty may erre; but honesty hates lyes.  
 I meddle not with things above my Sphere;  
 I creep among the shrubs, am void of feare*

Of Loves scarce thousand bolts, so mean, I'm not  
(if worth the aiming at) scarce worth the shot;  
No mortals hatred, I deserve, I'm free  
From hating any, for all I've Charitie:  
If any fault I have committed here,  
I will (if possible) mend it next year:  
But now the Presse hath overtaken my Pen,  
Till sixty and three, Farewell, Gentlemen.

Amersham May 16. 1661.

FINIS.

---

August 3. 1661.

*Imprimatur.*

G. Wharton.

---

Books lately Printed.

*A Commentary upon the whole Book of the Revelation, with some practiicall Observations, and severall Digressions, necessary for Vindicating, Clearing and Confirming many weighty and important Truths.*
